Sander, Henning, Dipl.-Ing., 71634 Ludwigsburg, Germany

The following information has been taken from the documents filed by the applicant

54 Exhaust emission control system with reducing-agent supply

- 57 An exhaust emission control system for cleaning the exhaust of a preferably lean-burn internal combustion engine, particularly a diesel engine used in motor vehicles, has an exhaust line in which a particle filter and an SCR catalyst are arranged in series in flow direction and a reducing-agent supply for adding ammonia to the exhaust of the internal combustion engine on the input side of the SCR catalyst. According to the invention, the exhaust emission control system has a hydrogen-producing unit for enriching the exhaust of the internal combustion engine with the hydrogen produced by this unit.
Application in motor vehicles.
